Subject: Application for Software Engineer – Purushottam

Dear Hiring Team,

I am excited to apply for the Software Engineer position. My foundation in software engineering is complemented by extensive training and practical experience in **Java, Spring Boot, and RESTful API** development, positioning me to make an immediate impact on your team.

I understand my career path shows some recent transitions. To clarify, from 2021 to 2023, I dedicated myself to pursuing a Master of Computer Applications (MCA). Immediately following graduation, I accepted an Assistant Professor role to actively apply and teach core concepts such as Data Structures and Algorithms, demonstrating my commitment to continuous learning and technical excellence.

Earlier this year, my tenure at Dlithe was shortened due to a temporary family health emergency. As remote options were unavailable, I prioritized my family's well-being. Thankfully, their recovery is complete, and I am now committed to resuming my professional journey with renewed energy and focus.

Currently, I am sharpening my skills by managing my technical website and working on independent projects, actively exploring Spring Boot, Microservices, and scalable backend development. This phase has ensured my technical expertise remains current and robust.

I am eager to contribute and work alongside a driven team of professionals. I am passionate about leveraging my skills to deliver value and am ready to transition into a challenging developer role with a long-term perspective.

Thank you for considering my application. I look forward to discussing how my technical background, adaptability, and professional resilience will help advance your goals.

Sincerely,
Purushottam
